

Experimental and method

RESEARCH NEWS · DECEMBER 2024

1 The parent locks the fun apps

Once, in the OS — Family Controls, not an in-app promise.

2 The child opens LogicLab instead

A daily mission: ~10 minutes of reasoning, offline.

3 The reasoning is the work

Quiz: Spot-R, Spot-R, Spot-R — Build-It — wrong answers are explained, never punished.

4 The ledger pays out

~20 points ~ 5 minutes on completion, synced to Firestore.

5 The balance buys real screen time

The shield lifts for exactly the earned minutes — then it returns.

PLATFORMS

SwiftUI iOS, on TestFlight Android Kotlin Compose

LESSONS

36 in 6 modules, bundled JSON — zero network

AI TUTOR

Gemini, Secrecy-locked — never gives the answer

ENFORCEMENT

The OS, not the app — FamilyControls, ManageSettings

PRIVACY

Opaque tokens — the app never sees the chosen apps

ACCOUNTS

Per-child — role-based rules, own data only
