From Lesson to Screen Time

From Lesson to Screen Time The Loop, in Five Steps

1 The parent locks the fun apps.
Once, in the operating system — not in ours.

2 The child solves a lesson.

Story → quiz → spot the flaw → sort → build. Wrong answers are never punished.

3 The AI challenge comes last.

4 The ledger pays out.
+20 points • +5 minutes

5 The shield lifts — for exactly those minutes
Then it returns, and the next lesson starts.

FIG 4. Reward values are those of the current build.

4 Core Task Types

Quiz (sound continuation), **Spot-It** (faulty step), **Sort-It** (inference chain), and **Build-It** (conclusion assembly). The child acts dynamically rather than memorizing definitions.
